Risk and reward profile

Risk profile

The Fund’s risk and reward profile shows the variations in value an investment in this Fund would have undergone over the past five years. The Fund’s risks rating may change in the future. The lowest risk category does not mean that the Fund is risk free. The risk category was calculated using simulated historical performance data and it may not be a reliable indicator of the fund's future risk profile

Why is the Fund in the specific category?

The Fund has been allocated to risk category 1 because the variation in performance is very low.

Investors should be aware that the investments of the Fund are subject to market fluctuations and other risks associated with the investments in transferable securities and other financial instruments. No guarantee can be given that the value of a Fund unit will not fall below its value at the time of acquisition.

Are there any other particular risks?

Major risks include credit risk (the ability by an issuer or an investment counterparty to honour its obligations), liquidity risk (the ability to deal in the investment instruments), operational risks (deficient processes, technical failures, catastrophic events and similar), legal and political risks (limitations of property rights, imposing of taxes or controls on investments and transactions, other legal risks).
